Abdelmouiz (Moataz) Kobry

Computing | AI Automation | Digital Systems | Cybersecurity-aware Infrastructure

president@mycdic.org | github.com/kobrymoataz | Portfolio

Professional summary

Computing specialist in training with a practical background in developing websites, digital platforms and operational workflows since 2016. Experience spanning more than 100 websites and digital projects, with a focus on reliable software, automation, infrastructure and institutional execution. Leads digital initiatives collaboratively with MYCDIC and Trendad teams.

Relevant experience

Digital Platforms & Technology Initiatives | Since 2016

- Developed and contributed to public websites, applications, workflow systems and related digital experiences.
- Worked across JavaScript, Python, Java, PHP, React, Node.js, APIs, SQL and automation integrations.
- Supported email-domain authentication, DNS configuration, SPF, DKIM, DMARC and deliverability workflows.

MYCDIC - Founder & President | Institutional digital leadership

- Leads technology work with the council and Trendad colleagues, including the public MYCDIC website and an internal operational management platform.
- Coordinates digital process design covering records, applications, verification, correspondence and workflow automation.

Education

Universidad de Castilla-La Mancha (UCLM), Escuela Superior de Informatica (ESI)
Computer Engineering studies - Computing track; focus on AI and automation. Degree studies in progress.

Engineering competencies

Programming: JavaScript, TypeScript, Python, Java, PHP; React, React Native and Node.js.
Data: PostgreSQL, MongoDB, Firebase, SQL-based workflows.
Automation: n8n, Google Apps Script, Google Workspace, Microsoft 365.
Delivery and operations: GitHub, GitHub Actions, API integration, DNS/email authentication and security-aware workflows.

Languages

Arabic | English | French | Spanish

Selected technical work

Public source code and representative institutional development work

Public open-source projects

RepoVerity - GitHub repository research and evidence-based audit workspace

Public metadata exploration, maintenance checks, and a structured developer workspace. github.com/kobrymoataz/repoverity

SubmissionLedger - Reliable request intake and outbound webhook delivery

Local-first self-hosted service with idempotency keys, durable SQLite outbox, bounded retries and HMAC-signed webhook attempts. Source repository

FlowFault - Controlled testing for forms and failure conditions

Local-first tools for HTML form inspection and authorized one-request network fault experiments with offline reports. Source repository

Institutional systems

MYCDIC public website - Public information, institutional communication and online engagement. Development leadership carried out with council and Trendad colleagues. Visit MYCDIC

MYCDIC internal platform - Ongoing administrative and digital workflow work. Private interfaces, individual records and operational data are not published.

Additional areas

- Wikipedia, Wikimedia and Wikidata technical and structured-information work.
- Institutional digital visibility, public-facing content systems and media-related technical support.
- Designing maintainable processes across public websites, operations, automation and communication channels.
